Feedback Report

8. What is your opinion about the duration of this programme?

A - Short

☒ B - Adequate

C - Long

9. Overall, how useful was this programme for you?

A - Very Much

☒ B - To Some Extent

C - Not useful

10. How would you rate the Teaching Qualities?

☒ A - Very good

☐ B - Good

☐ C - Average

☐ D - Poor

11. How would you rate the Materials Presented?

☒ A - Very good

B - Good

C - Average

D - Poor

12. How much of knowledge you learned today?

☒ A - a lot of it

B - Satisfactory

C - None of it

13. Did it fulfill your expectation?

☒ A - Yes

B - To Some extent

C - No

14. Planning of this Programme?

A - Excellent

☒ B - Very good

C - Good

D - Satisfactory

E - Poor

Any Other Comment (if any)

The program is very usefull  
for knowledge. The program is  
very good. Thank you Sir.

3. How would you rate the Teaching Qualities?  
A - Very good      ☒ B - Good      C - Average      D - Poor
4. How would you rate the Materials Presented?  
A - Very good      ☒ B - Good      C - Average      D - Poor
5. How much of knowledge you learned today?  
A - a lot of it      ☒ B - Satisfactory      C - None of it
6. Did it fulfill your expectation?  
☒ A - Yes      B - To Some extent      C - No
7. Planning of this Programme?  
A - Excellent      B - Very good      ☒ C - Good      D - Satisfactory  
E - Poor

The guest speaker was Mr.M. Sanjeevmaran, Project Engineer, Sybrit Solutions, Trichy. The event started with a welcome address delivered by the Head of the Department Mr.T.Ashok. The guest lecture was preceded by a short talk by the Principal Dr.P.Ranjith Kumar. In his talk, he emphasized the importance of research for the developments of engineering applications of Advanced High Speed Controllers and Sensor Technologies. The lecture started around 11.00 A.M and ended around 01.00 P.M. The lecture was received with admiration by the students and they also found the slides appropriate. The event ended with honorarium to the guest and vote of thanks.

Accredited by NAAC

Trichy-Chennai Trunk Road, Siruganur.

Tiruchirappalli-621 105

M.A.M School of Engineering is one of the top Engineering Colleges in Trichy. It has achieved global identity through its involvement in research in recent technology and successful completion of projects and products. The college, an ISO certified Institution is known for its rich tradition and high values bestowed upon by its Founder Chairman. The Institution falls under the control of AICTE and affiliated to ANNA UNIVERSITY CHENNAI along with prestigious accreditation by NAAC, New Delhi. MAMSE is equipped with world class infrastructure and highly qualified and experienced faculty.

#### About The Department

Electronics and Communication Engineering department was established in the academic year 2010-2011. The department occupies a prominent place in the annals of its academic history. The department has been consistently producing illustrious engineering graduates of high calibre who occupy prestigious positions in the academic and industrial fields. Majority of our faculty have intensive experience in research and teaching which provides the necessary cutting edge for industrial and research exposures to the students. The department organizes various student and faculty level technical events such as workshops, guest lectures, industrial visits and technical symposium to refine skills and talents of the Students.

#### Boarding and Lodging

Boarding and lodging if required, will be provided to the participants in the college campus on chargeable basis of Rs 200/- per day. Accommodation to participants alone will be provided in the Campus.

**Greetings from M.A.M. School of Engineering**

Kindly arrange to publish the following in “Today’s engagement column” on 05.09.2018 in your esteemed daily.

Programme	: Guest lecture on “Embedded Systems and PLC design”
Date & Time	: 05.09.2018 at 11.00 A.M to 12.30 P.M
Venue	: Seminar Hall –Main Building, M.A.M. School of Engineering.
Organized By	: Department of Electronics and Communication Engineering
Resource Person	: Mr. S. Ganesh Babu, Technical Director, 5D CADD CENTER, Trichy-620001.

Thanking you,

Department of Electronics and Communication Engineering

## Guest Lecture on "Embedded Systems and PLC Design" (05<sup>th</sup> September, 2018)

An Embedded system is a programmed controlling and operating system with a dedicated function within a larger mechanical or electrical system, often with real-time computing constraints. Any smart device nowadays will incorporate embedded systems within it for the decision making process. Printed Circuit Board is the foundation for every electronic product. PCB Designing is a mandate skill for an electrical/electronics engineer. In fact, in the United States, engineers who deal with PCB design get about 38% higher salaries than an average American worker does. With knowledge in embedded systems, students can develop their own electronic gadgets.

Department of ECE had organized a Guest Lecture on "Embedded Systems and PCB design" by inviting Industrial Expert in Embedded System, to equip our students with these kinds of additional skill sets on 5<sup>th</sup> September 2018. Students felt that the lecture was so interesting and useful.

## Feedback Report

1. What is your opinion about the duration of this programme?

☒ Short

☐ Adequate

☐ Long

2. Overall, how useful was this programme for you?

☒ Very much

☐ To Some Extent

☐ Not useful

3. How would you rate the Teaching Qualities?

☒ Very Good

☐ Good

☐ Average

☐ D-

☐ Poor

4. How would you rate the Materials Presented?

☒ Very Good

☐ Good

☐ Average

☐ D-

☐ Poor

5. How much of knowledge you learned today?

☐ A lot of it

☒ Satisfactory

☐ None of it

6. Did it fulfill your expectation?

☒ Yes

☐ Some extent

☐ No

7. Planning of this Programme?

☒ Excellent

☐ Very Good

☐ Good

☐ D-

☐ Satisfactory

☐ E-Poor

8. Any other Comment (if any):

Good.

## Guest Lecture on "Advanced Technologies in Embedded Systems" (12<sup>th</sup> September, 2018)

Students of Department of Electronics and Communication Engineering had the privilege of having another Guest lecture and interactive session with Mr.T.L.kannan, Project manager, ChiArRo Solutions and Services Pvt Ltd on the topic "Advanced Technologies in Embedded Systems". Mr. M. Chandrasekar/Assistant Professor/ECE introduced the speaker. The lecture started with the introduction about the development of Embedded Systems, since its inception. Moving ahead, he elaborated that these advancements are leading the embedded software industry to predicted growth. Then he emphasized more about the requirement of new languages and embedded development tools such as compiler. Finally he demonstrated few illustrations such as switching ON/OFF a LED, speed control of stepper motor through an android mobile. Student felt that the lecture was so interesting and interactive. The lecture was received with admiration by the students and they also found the slides appropriate. The event ended with honorarium to the guest and vote of thanks.

# M.A.M. SCHOOL OF ENGINEERING

SIRUGANUR- TIRUCHIRAPPALLI - 621 105

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

Guest lecture on "An overview of artificial intelligence, machine learning and deep learning "

(26<sup>th</sup> Dec 2018)

Artificial intelligence (AI), sometimes called machine intelligence, is intelligence demonstrated by machines, in contrast to the natural intelligence displayed by humans and other animals. Computer science defines AI research as the study of "intelligent agents": any device that perceives its environment and takes actions that maximize its chance of successfully achieving its goals. More in detail, Kaplan and Haenlein define AI as "a system's ability to correctly interpret external data, to learn from such data, and to use those learnings to achieve specific goals and tasks through flexible adaptation". Colloquially, the term "artificial intelligence" is applied when a machine mimics "cognitive" functions that humans associate with other human minds, such as "learning" and "problem solving"

Machine learning (ML) is the scientific study of algorithms and statistical models that computer systems use to progressively improve their performance on a specific task. Machine learning algorithms build a mathematical model of sample data, known as "training data", in order to make predictions or decisions without being explicitly programmed to perform the task. Machine learning algorithms are used in the applications of email filtering, detection of network intruders, and computer vision, where it is infeasible to develop an algorithm of specific instructions for performing the task. Machine learning is closely related to computational statistics, which focuses on making predictions using computers. The study of mathematical optimization delivers methods, theory and application domains to the field of machine learning. Data mining is a field of study within machine learning, and focuses on exploratory data analysis through unsupervised learning.

Deep learning models are vaguely inspired by information processing and communication patterns in biological nervous systems yet have various differences from the structural and functional properties of biological brains (especially human brains), which make them incompatible with neuroscience evidences.

Department of ECE organized Guest lecture on "An overview of artificial intelligence, machine learning and deep learning" to equip the Final year ECE students with the basic concepts of programming in artificial intelligence, machine learning and deep learning. Mr.K.YASAR ARAFATH initiated the function with a brief introduction about artificial intelligence, machine learning and deep learning. The session began with the basics of artificial intelligence, machine learning and deep learning, the. This course is a quick way to understand in its application across business problems, machine learning is also referred to as predictive analytics.

# 20-year-old man held under POCSO Act

**SPECIAL CORRESPONDENT**  
**RAMANATHAPURAM**

The police have arrested a 20-year-old man on charges of raping a 13-year-old girl, a Sri Lankan Tamil, at the government hospital here on Tuesday.

They said the victim was taking care of her father, a Sri Lankan Tamil refugee, undergoing treatment at the hospital after he fractured his leg in an accident last week when the accused, employed in a bakery in front of the hospital, took the girl to a bathroom inside the hospital and allegedly raped her.

Police said the accused, M. Saravanan of Krishnapuram in Periyapattinam had 'befriended' the girl, who

was visiting the bakery in the last one week for buying milk and bread to her father. On Tuesday afternoon, the accused visited the hospital and lured the girl and sexually assaulted her.

After she raised an alarm, he let her out from the bathroom and escaped. After the girl reported the incident to her father and others in the ward, a complaint was lodged. The police registered an FIR and arrested the accused.

SP Omprakash Meena ordered his arrest under the provisions of Protection of Children under Sexual Offences Act, 2012. The accused was being interrogated and likely to be remanded on Wednesday.

former Vice Chancellor, Bharathidasan University, presides, Shrimati Indira Gandhi College campus, 10.30 a.m.

**M.A.M.School of Engineering:** Lecture on Introduction to robotics by P.Mohamed Rafiq, 2 pm.; Lecture on Low power applications using tanner by Vignesh, 2.30 p.m.

**Department of Information and Public Relations:** Government exhibition, Pattabiraman Street, Then-nur, 4 p.m.to 10 p.m.

**Tiruchi O&G Society, Indian Medical Association, Department of Medical and Rural Health Services, FOGSI and SMRITI:** Walkathon for health empowerment and respect for women, K.Rajamani, Collector, chief guest, IMA Hall, Salai Road, 6 a.m.

# M.A.M. SCHOOL OF ENGINEERING

SIRUGANUR- TIRUCHIRAPPALLI - 621 105

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

Guest lecture on "Low Power Applications using Tanner"

(2<sup>nd</sup> Jan 2019)

The need for low-power design is becoming a major issue in high-performance digital systems such as microprocessors, Digital Signal Processors (DSPs) and other applications. The increasing market of mobile devices and battery powered portable electronic systems is creating demands for chips that consume the smallest possible amount of power.

In VLSI circuits, power dissipation is a critical design parameter as it plays a vital role in the performance estimation of the battery operated devices particularly used in biomedical applications. The decrease in chip size and increase in chip density and complexity escalate the difficulty in designing higher performance low power consuming system on a chip. Further, overall power management on a chip is becoming a big challenge below 100 nm node because of its increased design complexity. Besides, leakage current also plays a vital role in Power management of low power VLSI devices. In sub-micron technologies, leakage and dynamic power consumption is becoming an essential design parameter as it is dissipating a considerable portion of the total power consumption. To increase the battery life of portable devices, leakage and dynamic power reduction is emerging as a primary goal of the VLSI circuit design.

The Tanner T-Spice simulator, part of the Tanner Tool Suite, integrates easily with other design tools in the flow and is compatible with industry-leading standards. It improves simulation accuracy with advanced modeling, multi-threading support, device-state plotting, real-time waveform viewing, and analysis, and a command wizard for simple SPICE syntax creation.

Department of ECE organized Guest lecture on "Low Power Applications using Tanner" to equip the Final year ECE students with the basic concepts of programming in Low Power Applications using Tanner. **Mr.VIGNESH** initiated the function with a brief introduction about Tanner tool. The session began with the basics of the low power applications and tanner tool. This course is a quick way to understand the tanner tool used in low power applications.

# Railways may ban plastics in 36 stations

Tiruchi among them

S. VIJAY KUMAR

CHENNAI

The Indian Railways may ban plastics and enforce the 'polluter pays' rule at 36 major railway stations across the country, including Chennai Central, Tiruchi and Thiruvananthapuram in Southern Railway.

As part of initiatives to

achieve 'ISO 14001' certification prescribed by the Bureau of Indian Standards (BIS), the 36 stations that constitute 5% of major railway stations in the network, were identified for launching an intensive cleanliness, water and energy management programme.

# M.A.M. SCHOOL OF ENGINEERING

SIRUGANUR- TIRUCHIRAPPALLI – 621 105

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

## Guest lecture on “Industrial Automation using PLC and SCADA”

(21 Feb 2019)

Automation generally refers to the science and technology of process control and includes the control of chemical and petrochemical plants, Oil refineries, iron and steel plant, Power plants, cement mills, Paper pulp and paper mills water and waste water treatment plants and many like all this. The basic objective of automation is identifying the information flow and manipulates the material and energy flow as given process in a desired way. PLC & SCADA plays an important role in automating industrial system.

Automation devices such as controller Systems and methods are provided that receive statements or other unit of data interaction from an automation device, provide the statements to an appropriate system or service for processing, and optionally return a response such as a result set. Furthermore, in accordance with an aspect of the invention native controller code, variables, or tags can be mapped to stored data, procedures or combinations of data and/or procedures and updated automatically or semi automatically. A programmable logic controller (PLC) or programmable controller is a digital computer used for automation of electromechanical processes, such as control of machinery on factory assembly lines, amusement rides, or lighting fixtures. PLCs are used in many industries and machines. Unlike general-purpose The subject invention pertains to facilitating communication between industrial computers, the PLC is designed for multiple inputs and output arrangements, extended temperature ranges, immunity to electrical noise, and resistance to vibration and impact. Programs to control machine operation are typically stored in battery-backed or non-volatile memory.

Early PLCs were designed to replace relay logic systems. These PLCs were programmed in "ladder logic", which strongly resembles a schematic diagram of relay logic. This program notation was chosen to reduce training demands for the existing technicians. Other early PLCs used a form of instruction list programming, based on a stack-based logic solver. Modern PLCs can be programmed in a variety of ways, from ladder logic to more traditional programming languages such as BASIC and C. Another method is State Logic, a very high-level programming language designed to program PLCs based on state transition diagrams.

Department of ECE organized Guest lecture on “Industrial Automation using PLC and SCADA” to equip the second and third year ECE students with the basic concepts of Industrial Automation using PLC and SCADA. Mr.N.KUMAR initiated the function with a brief introduction about. The session began with the basics of the PLC and SCADA. This course is a quick way to understand the using PLC and SCADA used in Industrial Automation.

**Greetings from M.A.M. School of Engineering**

Kindly arrange to publish the following in “Today’s engagement column” on 21.02.2019 in your esteemed daily.

Programme : Seminar on “Industrial Automation using PLC and SCADA”

Date & Time : 21.02.2019 at 02.00 P.M

Venue : Smart class room, M.A.M. School of Engineering.

Organized By : Department of Electronics and Communication Engineering

Resource Person : Mr.N.Kumar,

Business Head,

Gate Way finishing School,

Trichy.

Thanking you,

# Railways may ban plastics in 36 stations

Tiruchi among them

S. VIJAY KUMAR  
CHENNAI

The Indian Railways may ban plastics and enforce the 'polluter pays' rule at 36 major railway stations across the country, including Chennai Central, Tiruchi and Thiruvananthapuram in Southern Railway.

As part of initiatives to

achieve 'ISO 14001' certification prescribed by the Bureau of Indian Standards (BIS), the 36 stations that constitute 5% of major railway stations in the network, were identified for launching an intensive cleanliness, water and energy management programme.

## TIRUCHI TODAY

### RELIGION

**Sri Vishnu Sahasranama Parayana Sabha:** Sri Vishnu Sahasranama parayanam, Ranganayaki Thayar Sannidhi, Srirangam Sri Ranganathaswamy Temple, 6 p.m.; Sri Krishnar Sannidhi, 6.45 p.m.

**Sri Rama Nama Sath Sangam, Ayyappa Nagar:** Sri Rama Nama parayanam, I Street, SMESC Colony, 6 p.m.

### CULTURE

**Organising Committee:** Sri Sadhguru Thyagabrahma aradhana, flute recital by Ajith Ranganathan-S.Balakrishnan and party, Koratha Moolai, Srirangam, 6 p.m.; vocal concert by Sandeep Narayanan and party, 8 p.m.

**Ezhuthamizh Iyakkam:** International Mother Language Day, M.Kumarasamy, presides, Tamil Sangam premises, W.B.Road, 9 a.m.

### GENERAL

**St. Joseph's College:** English Association, M.Mohamed Siraj, Head, Department of French, Jamal Mohamed College, speaks on 'A sneak peak on French literature and translations', 4.30 p.m.

**Bishop Heber College:** Graduation Day, N.Rajendran, Vice-Chancellor,

Alagappa University, delivers graduation day address, 10 a.m.; finals of state level inter-collegiate football tournament for Rev.A.F.Gardiner Memorial Trophy, C.R.Srikrishna, FIFA referee, distributes prizes, 4 p.m.

**National College:** Conference on 'Modinomics', J.M.Kavitha, Associate Professor, VELS Deemed University, speaks on Demonetisation, 9.30 a.m.

**K.Ramakrishnan College of Engineering:** Faculty development programme on modern trends in image processing, Devaraj, Dean, School of Electronics and Electrical Technology, Kalasalingam Academy of Research and Education, resource person, 10 a.m.

**Urumu Dhanalakshmi College:** GCP Book Club, book review, 1.30 p.m.

**Jamal Mohamed College:** International conference on mathematical methods and computation, 9.30 a.m.; valedictory address by Sunny Kur-lakose, Dean, Federal Institute of Science and Technology, Ernakulam, 4 p.m.

**M.A.M.School of Engineering:** Seminar on industrial automation using PLC and SCADA, 2 p.m.

**Field Publicity Office:** Special outreach programme on 150<sup>th</sup> birth anniversary of Mahatma Gandhi and Central schemes, Punjai Sangenthil, 10.30 a.m.

**Bharathidasan University Constituent College, Kumalur:** Book review by students, 1.40 p.m.

## Guest lecture on “Industrial Automation using PLC and SCADA”

(21 Feb 2019)

Automation generally refers to the science and technology of process control and includes the control of chemical and petrochemical plants, Oil refineries, iron and steel plant, Power plants, cement mills, Paper pulp and paper mills water and waste water treatment plants and many like all this. The basic objective of automation is identifying the information flow and manipulates the material and energy flow as given process in a desired way. PLC & SCADA plays an important role in automating industrial system.

Automation devices such as controller Systems and methods are provided that receive statements or other unit of data interaction from an automation device, provide the statements to an appropriate system or service for processing, and optionally return a response such as a result set. Furthermore, in accordance with an aspect of the invention native controller code, variables, or tags can be mapped to stored data, procedures or combinations of data and/or procedures and updated automatically or semi automatically. A programmable logic controller (PLC) or programmable controller is a digital computer used for automation of electromechanical processes, such as control of machinery on factory assembly lines, amusement rides, or lighting fixtures. PLCs are used in many industries and machines. Unlike general-purpose The subject invention pertains to facilitating communication between industrial computers, the PLC is designed for multiple inputs and output arrangements, extended temperature ranges, immunity to electrical noise, and resistance to vibration and impact. Programs to control machine operation are typically stored in battery-backed or non-volatile memory.

Early PLCs were designed to replace relay logic systems. These PLCs were programmed in "ladder logic", which strongly resembles a schematic diagram of relay logic. This program notation was chosen to reduce training demands for the existing technicians. Other early PLCs used a form of instruction list programming, based on a stack-based logic solver. Modern PLCs can be programmed in a variety of ways, from ladder logic to more traditional programming languages such as BASIC and C. Another method is State Logic, a very high-level programming language designed to program PLCs based on state transition diagrams.

Department of ECE organized Guest lecture on “Industrial Automation using PLC and SCADA” to equip the second and third year ECE students with the basic concepts of Industrial Automation using PLC and SCADA. Mr. N. KUMAR initiated the function with a brief introduction about. The session began with the basics of the PLC and SCADA. This course is a quick way to understand the using PLC and SCADA used in Industrial Automation.

## Guest Lecture on "Industrial Automation and Robotics" (27<sup>th</sup> June, 2019)

As part of the activity of Innovation / Project lab, the department of Electronics and Communication Engineering organised a guest lecture by **Sai Vignesh.S** of Axis Global Automation, Tiruchirappalli on **27<sup>th</sup> June 2019** at Smart class. All the students of ECE attended the lecture. In his address, he stressed the need for doing mini projects in lower semesters before attempting to do a major project in the final semester, so that they can gain experience. He said that project work is a way of applying the skills and knowledge acquired during the academics in solving or analysing real life problems and drawing conclusions.

At the end of the guest lecture, two students gave their feedback, and explained how they were benefited by his lecture. Earlier, Ms.K.Umarani, Senior Assistant Professor of ECE department introduced the speaker to the students and welcomed him. P.Kavitha, HOD of ECE department, proposed the vote of thanks.

# M.A.M. SCHOOL OF ENGINEERING

Siruganur, Trichy-621105

Department of Electronics and Communication Engineering

## Seminar on "Image Processing" (3<sup>rd</sup> July, 2019)

As part of the activity of Innovation / Project lab, the department of Electronics and Communication Engineering organised a seminar by **Mr.Saravanan** of Pantech Solutions, Tiruchirappalli on **3<sup>rd</sup> July, 2019** at Smart class. All the students of ECE attended the lecture. In his address, Mr. Saravanan initiated the importance of image processing in the field of electronics and communication Engineering. He discussed how to import the image with optical scanner or by digital photography and to analyze and manipulate the image which includes data compression and image enhancement and spotting patterns that are not visible to human eyes like satellite photographs.

**Image processing** is a method to convert an image into digital form and perform some operations on it, in order to get an enhanced image or to extract some useful information from it. Usually Image Processing system includes treating images as two dimensional signals while applying already set signal processing methods to them. It is among the rapidly growing technologies today, with its applications in various aspects of a business. Image Processing forms core research area within engineering and computer science disciplines too. We all are in midst of revolution ignited by fast development in computer technology and imaging. Against common belief, computers are not able to match humans in calculation related to image processing and analysis. But with increasing sophistication and power of the modern computing, computation will go beyond conventional, Von Neumann sequential architecture and would contemplate the optical execution too. Parallel and distributed computing paradigms are anticipated to improve responses for the image processing results.

At the end of the guest lecture, two students gave their feedback, and explained how they were benefited by his lecture. Earlier, Ms.K.Umarani, Senior Assistant Professor of ECE department introduced the speaker to the students and welcomed him. P.Kavitha, HOD of ECE department, proposed the vote of thanks.

## Guest Lecture on "Arduino Microcontroller" (17<sup>th</sup> July, 2019)

As part of the activity of Innovation / Project lab, the department of Electronics and Communication Engineering organised a guest lecture by **Ms.Dharani** of Hitakey Infosys, Tiruchirappalli on **17 July 2019** at Smart class. All the students of ECE attended the lecture. In his address, Mr. Sunil stressed the need for doing mini projects in lower semesters before attempting to do a major project in the final semester, so that they can gain experience. He said that project work is a way of applying the skills and knowledge acquired during the academics in solving or analysing real life problems and drawing conclusions.

Arduino is an open-source electronics platform based on easy-to-use hardware and software. Arduino boards are able to read inputs - light on a sensor, a finger on a button, or a Twitter message - and turn it into an output - activating a motor, turning on an LED, publishing something online. You can tell your board what to do by sending a set of instructions to the microcontroller on the board. To do so you use the Arduino programming language (based on Wiring), and the Arduino Software (IDE), based on Processing.

Arduino has been used in thousands of different projects and applications. The Arduino software is easy-to-use for beginners, yet flexible enough for advanced users. It runs on Mac, Windows, and Linux. Teachers and students use it to build low cost scientific instruments, to prove chemistry and physics principles, or to get started with programming and robotics.

At the end of the guest lecture, two students gave their feedback, and explained how they were benefited by his lecture. Earlier, Ms.K.Umarani, Senior Assistant Professor of ECE department introduced the speaker to the students and welcomed him. P.Kavitha, HOD of ECE department, proposed the vote of thanks.

## Feedback Report

1. What is your opinion about the duration of this programme?  
A- Short B- Adequate C- Long
2. Overall, how useful was this programme for you?  
A- Very much B- To Some Extent C- Not useful
3. How would you rate the Teaching Qualities?  
A- Very Good B- Good C- Average D- Poor
4. How would you rate the Materials Presented?  
A- Very Good B- Good C- Average D- Poor
5. How much of knowledge you learned today?  
A- A lot of it B- Satisfactory C- None of it
6. Did it fulfill your expectation?  
A- Yes B- Some extent C- No
7. Planning of this Programme?  
A- Excellent B- Very Good C- Good D- Satisfactory E- Poor
8. Any other Comment (if any): Good

## Seminar on "Labview" (24<sup>th</sup> July, 2019)

As part of the activity of Innovation / Project lab, the department of Electronics and Communication Engineering organised a seminar by **Mr. Sheik Abdul Ansari** of Galwin Technology, Tiruchirappalli on **24<sup>th</sup> July, 2019** at Smart class. All the students of ECE attended the lecture. After his address, he discussed about the Labview which offers a graphical programming approach that helps to visualize every aspect of many applications, including hardware configuration, measurement data and debugging. This visualization makes it simple to integrate measurement hardware from any vendor, represent complex logic on the diagram, develop data analysis algorithms and design custom engineering user interfaces. At the end of the seminar, few students gave their feedback, and explained how they were benefited by his lecture. Earlier, Ms.K.Umarani, Senior Assistant Professor of ECE department introduced the speaker to the students and welcomed him. P.Kavitha, HOD of ECE department, proposed the vote of thanks.

## Guest Lecture on “Carrier Guidance Program For Gate Exam” (08<sup>th</sup> January, 2020)

Department of Electronics and Communication Engineering had organized a Guest lecture on “Carrier Guides Program For Gate Exam” by inviting Dr.S.Thiyagarajan. M.E.PhD Managing Director, Gate Win, Tiruchirappalli on **08 January 2020** at Smart class. All the students of ECE attended the lecture. Students felt that the lecture was so interesting and useful.

The purpose of the GATE 2017 exam is to test the students knowledge and understanding of their under Graduate level subjects in Engineering and Science. The GATE score reflects the relative performance level of a candidate. Every year lakhs of Engineering graduate students are coming from universities and engineering colleges. In the present competitive scenario, to measure and test the calibre of engineering students is possible through the GATE exam only. The GATE score of the candidate is also used by several public sector under takings (PSU) (i.e.government-owned companies) for recruiting graduate engineers in entry-level positions, to get Fellowship Programs from CSIR and Scholarships in ME/M.Tech and many more.

At the end of the guest lecture, two students gave their feedback, and explained how they were benefited by his lecture. Earlier, Ms.K.Umarani, Senior Assistant Professor of ECE department introduced the speaker to the students and welcomed him. P.Kavitha, HOD of ECE department, proposed the vote of thanks.

## Guest Lecture on "Emerging trends in VLSI" (22<sup>nd</sup> January, 2020)

Department of Electronics and Communication Engineering had organized a Guest lecture on "Emerging trends in VLSI" by inviting M.Manoharan. Head projects and operation, Green soft groups, Tiruchirappalli on **22 January 2020** at Smart class. All the students of ECE attended the lecture. Students felt that the lecture was so interesting and useful.

In the introduction of Moore's Law drives VLSI technology to continuous increases in transistor densities and higher clock frequencies. This tutorial will review the trends in VLSI technology scaling in the last few years and discuss the challenges facing process and circuit engineers in the 100nm generation and beyond. The first focus area is the process technology, including transistor scaling trends and research activities for the 100nm technology node and beyond. The transistor leakage and interconnect RC delays will continue to increase. The lecture will review new circuit design techniques for emerging process technologies, including dual VI transistors and silicon-on-insulator. It will also cover circuit and layout techniques to reduce clock distribution skew and jitter, model and reduce transistor leakage and improve the electrical performance of flip-chip packages. Finally, the lecture will review the test challenges for the 100nm technology node due to increased clock frequency and power consumption (both active and passive) and present several potential solutions.

At the end of the guest lecture, two students gave their feedback, and explained how they were benefited by his lecture. Earlier, Ms.K.Karthikeyan, Senior Assistant Professor of ECE department introduced the speaker to the students and welcomed him. P.Kavitha, HOD of ECE department, proposed the vote of thanks.

## Guest Lecture on “Big Data and Artificial Intelligence Analysis” (12<sup>nd</sup> February, 2020)

Department of Electronics and Communication Engineering had organized a Guest lecture on “Big Data and Artificial Intelligence Analysis” by inviting K.M.Iqbal, Network Administrator AADHROSE INFOTECH, Tiruchirappalli on 12 February 2020 at Smart class. All the students of ECE attended the lecture. Students felt that the lecture was so interesting and useful.

Big data describes the stunningly increasing growth, availability and utilization of information in today's world. The continuously increasing volume of structured and unstructured information, the variety of it, and the speed with which it is generated, through social media, sensor data as well as transaction data, poses today's leaders and specialists with both increased opportunities and devilish challenges. With big data benefitting from increased storage capabilities, thinking moves away from what records to keep to ponder the question of how to make sense of these large volumes of data. About 90% of all data in the world has been generated in the last two years, coming in from traditional databases, text documents, email, meter-collected data, video, audio, stock ticker data and financial transactions.

Artificial intelligence is used in a variety of ways and can be found across a large number of sectors, from assembly line robots to advanced toys, and from speech recognition systems to medical research. Finally, the lecture will review the find patterns in data, which is why it is commonly applied in online search engines and recommendation sites. Artificial intelligence would allow users of big data to automate and enhance complex descriptive and predictive analytical tasks that would be extremely labour intensive and time consuming if performed by humans.

At the end of the guest lecture, two students gave their feedback, and explained how they were benefited by his lecture. Earlier, Mr.K.Karthikeyan, Assistant Professor of ECE department introduced the speaker to the students and welcomed him. P.Kavitha, HOD of ECE department, proposed the vote of thanks.

## Guest Lecture on "Renewable Energy Battery" (19<sup>th</sup> February, 2020)

Department of Electronics and Communication Engineering had organized a Guest lecture on "Renewable Energy Battery" by inviting M.Dharani, Managing Director, Hitakey Infosys, Tiruchirappalli on 19 February 2020 at Smart class. All the students of ECE attended the lecture. Students felt that the lecture was so interesting and useful.

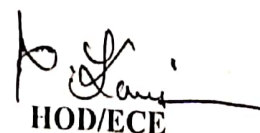

In the introduction of Storage batteries offer a viable solution for storing intermittent energy supplies associated with renewable energy. Cost is lowering as production increases, and they provide hope for a future that is tied to clean renewable energy. Another important metal used in lithium-ion battery production is cobalt.

A battery is defined as a device which is used for converting the chemical energy into electrical energy in the electrical field. There are several types of batteries used in the different electronic and electrical devices. But, these batteries come with certain chemicals including compounds of mercury and lead having the highly toxic nature. Apart from that, the batteries having chemicals are prone to leakages and explosions.

Finally, the lecture will review using bio-batteries eliminates this problem because they have a greater potential for using instead of the chemical batteries.

At the end of the guest lecture, two students gave their feedback, and explained how they were benefited by his lecture. Earlier, Mr.K.Karthikeyan, Assistant Professor of ECE department introduced the speaker to the students and welcomed him. P.Kavitha, HOD of ECE department, proposed the vote of thanks.

**“Advanced Technologies in Precision Farming”**

Department of Electronics and Communication Engineering organized a webinar on “Advanced Technologies in Precision Farming” on 22.05.20 at 3.00 pm. An overwhelming response is received from participants. Nearly 97 people from our Institution as well as from other institution have attended the program.

The webinar began with the welcome address by the Head of the Department Ms.P,Kavitha/ECE. She has introduced and welcomed the resource person Ms. Jerlin Hemnath, Managing Director, Hitech Infosys. The session then continued by Ms. Jerlin Hemnath who began with an introduction about precision farming, following which she shed the light on the advanced technologies of Precision farming.

In sequel, she added the below points in her speech:

The efficiency of farming lies in a farmer's ability to predict natural conditions and react to them in the quickest way possible. A few decades ago, the precision of such forecasts wasn't so reliable. Nowadays, The Internet of Things is successfully fueling precision agriculture as a new direction in farming. Technological advancements allow both small and large-scale agricultural businesses to implement precision agriculture. It is only now becoming widespread in this decade — yet, the origins of this trend can be traced back to the 90s. Back then, GPS-satellite adoption allowed farmers to gather datum and steer equipment automatically. Now, there are more technologies that allow farmers to gather more precise data — sensors, aerial devices, stationary IoT solutions for precision agriculture, and so on.

The session ended with hearty thanks to the resource person Ms. Jerlin Hamnath at 5.00 pm.

**WEBINAR**  
**ON**  
**"ADVANCED TECHNOLOGIES IN PRECISION FARMING"**  
**DATE: 22.05.2020**

### What does it do??

- reducing the production cost and wastage, as tailored needs of each plot is catered to.
- data collection and analysis of farmplots which comprises of sensors, drones and robots for recording the data and software as a service (SaaS) can be used to adapt to Precision farming.
- Rigorous data collection is done on soil testing, plot measurement, weather pattern analysis and crop analysis through sensor equipped devices placed along the fields.
- The data is calibrated to devise conclusions and based upon those results a very detailed and precise set of practices can be adopted.

### PRESENT SCENARIO

- ISRO, in collaboration with Central Potato Research Institute, Shimla has initiated a study on exploring the role remote sensing for PF.
- Central Potato Research Station - Jalandhar (Punjab) Role of remote sensing in mapping the variability w.r.t space & time
- MS Swaminathan Research Foundation - Chennai in collaboration with NABARD has adopted a village in Dindigul district of Tamilnadu for variable rate inputs application

### Challenge and task for India

- operational holding of land average per farmer is very low
- Agriculture Census of 2010-11--in the past 40 years, the farming land is shrunk and the number of farmers had doubled
- average size of a single holding has been estimated as 1.15 hectare
- farmers with large operational holdings, i.e., 10 hectares, is just 0.70%.

### What is precision farming

- "Precision agriculture is doing the right thing, in the right place, in the right way at the right time"
- It is farming management concept based on observing, measuring, and responding to inter and intra field variability in crops

### Why it is needed??

- Global population will reach about 9.6 billion by 2050
- Farming is under pressure to produce more food with
  - Less energy
  - Less labour
  - Environmental management of land water and soil
- World Economic Forum says farming is the direct source of livelihood for more than 55% percent population in India.
- Agriculture contributes to just 13% percent to India's \$2 trillion economy
- In developing economies, 32 percent of food losses occur during food production as analysed by McKinsey on FAO data.
- Agriculture is purely hard work without technology and mechanisms its impossible

**"Microwave Amplifier Design for Specified Gain"**

Department of Electronics and Communication Engineering organized a webinar on "Microwave Amplifier Design for Specified Gain" on 24.06.20 at 11.00 am. An overwhelming response is received from participants. Nearly 97 people from our Institution as well as from other institution have attended the program.

The webinar began with the welcome address by the Head of the Department Ms.P,Kavitha/ECE. She has introduced and welcomed the Mr. C. Mahendran, Assistant Professor, Department of Electronics & Communication Engineering, Alagappa Chettiar Government College of Engineering and Technology, Karaikudi. The session then continued by Mr. C. Mahendran who began with an introduction about Microwave Amplifier, following which she shed the light on the advanced technologies of output matching network is optimized to achieve the desired gain, optimizing VSWR.

In sequel, she added the below points in her speech:

A wideband microwave amplifier design adopting negative image synthesis is presented. Various RF and microwave characteristics of the amplifier have been analyzed and simulated. The gain and stability of a general two-port amplifier in terms of parameters of the transistor will be investigated for an amplifier and oscillator design. The stability condition is usually frequency dependent since matchings generally depend on frequency (stability may be possible for a frequency but not possible for others). The bandwidth can be improved by designing for less than maximum gain will improve bandwidth, but the input and output ports will be poorly matched.

The session ended with hearty thanks to the Professor Mr. C. Mahendran at 01.00 pm.

## RESOURCE PERSON DETAILS

Mr.C.Mahendran

Assistant Professor,

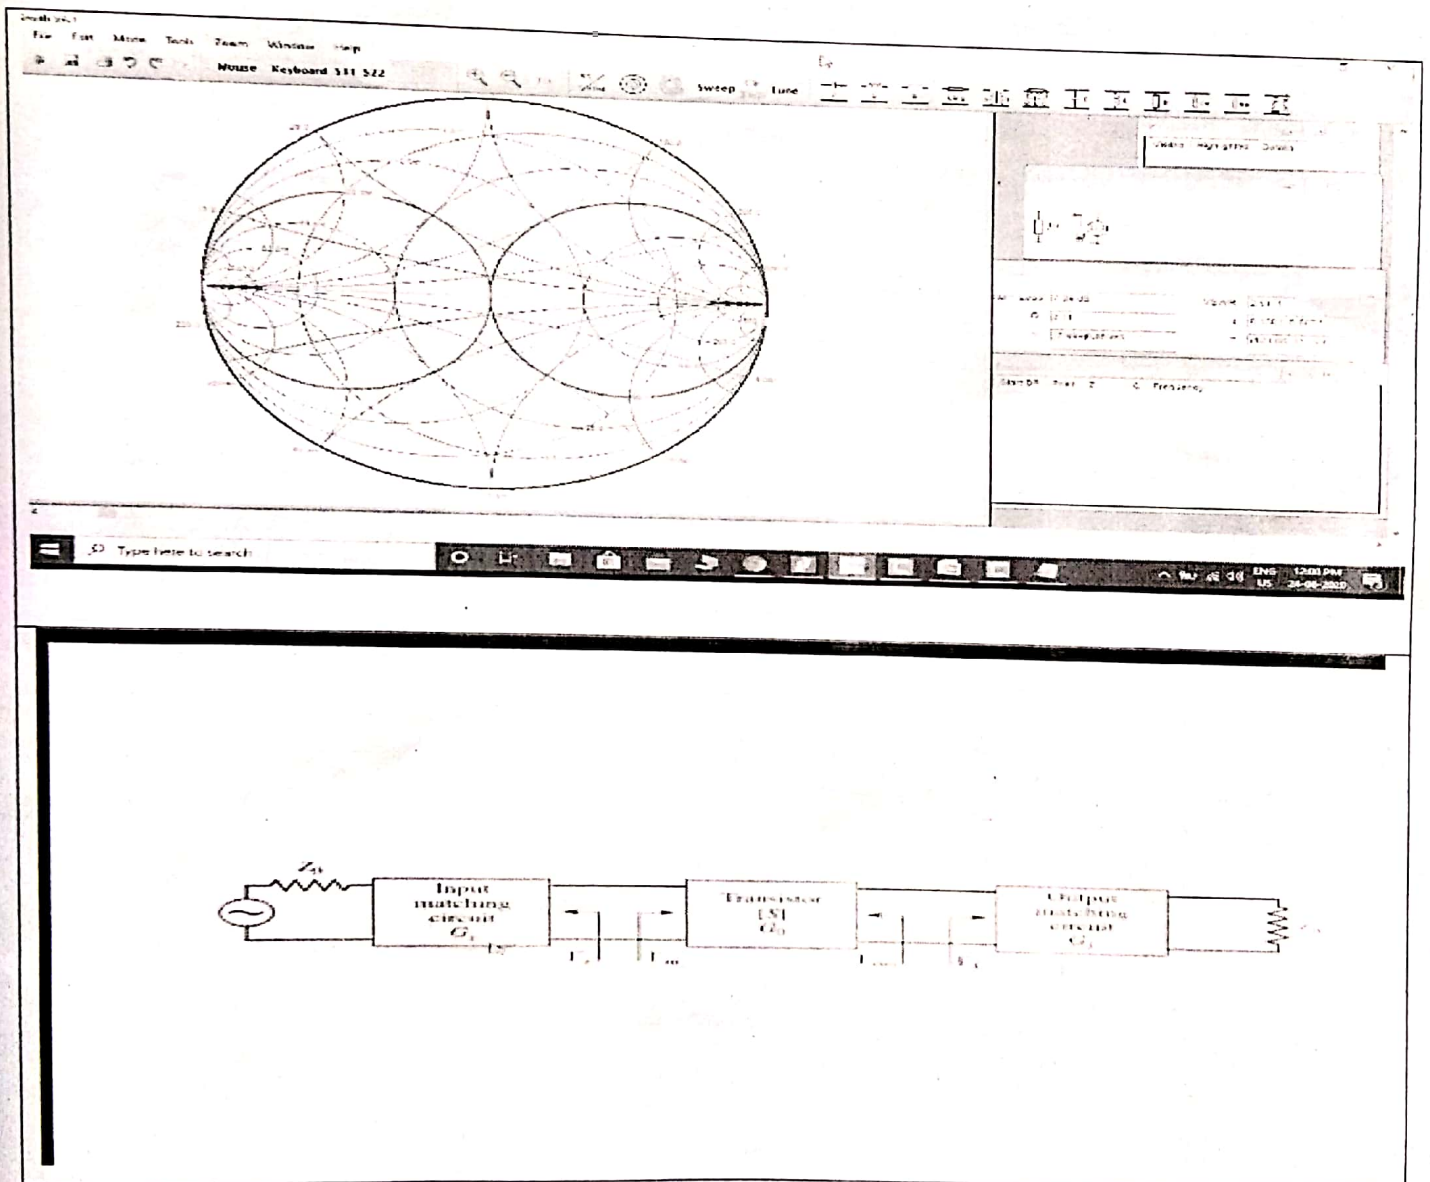

Electronics and Communication Engineering

Alagappa Chettiar Government College of Engineering & Technology,

Karaikudi – 630 003

Mr.C.Mahendran has completed his B.E degree in ECE from Government College of Engineering, Tirunelveli in the Year 1997 and M.E (Microwave & Optical Engineering) from Alagappa Chettiar Govt. College of Engineering & Tech., Karaikudi in 2002. And then he has worked as Lecturer in various self financing Engineering Colleges. In the year 2005, he has joined as Scientist (Grade-B) in Centre for Development of Advanced Computing (CDAC), Thiruvananthapuram at RF Division. And then he has joined as Assistant Professor in Govt.Engineering College in the year 2006. At Present he is working at Alagappa Chettiar Government College of Engineering & Tech., Karaikudi. His domain of interest includes RF Circuit Design and Radiation System design. He has published about 20 Papers in National and International Journals.

**“Enabling Technologies for future Wireless Communication”**

Department of Electronics and Communication Engineering organized a webinar on “Enabling Technologies for future Wireless Communication” on 01.07.20 at 04.00 pm. An overwhelming response is received from participants. Nearly 98 people from our Institution as well as from other institution have attended the program.

The webinar began with the welcome address by the Head of the Department Ms.P,Kavitha/ECE. She has introduced and welcomed the resource person Mr.Kamalesh, Sr.Project Engineer, Pantech solutions. The session then continued by Mr.Kamalesh who began with an introduction about Wireless Communication, following which she shed the light on the advanced technologies of future Wireless Communication.

In sequel, she added the below points in her speech:

The wireless –access networks of today will have to evolve in several dimensions in order to address the challenges and expectations of the future. New technology components will be introduced as part of the evolution of current wireless-access technologies, such as HSPA and LTE. However, additional components may also constitute future new wireless-assesses technologies, which may complement the evolved technologies. The lifeline of IoT lies in the ability of IoT devices to transmit and receive information.

The session ended with hearty thanks to the resource person Mr.Kamalesh at 06.00 pm.

**“Interview Skills and Coding Techniques”**

Department of Electronics and Communication Engineering organized a webinar on “Interview Skills and Coding Techniques” on 08.07.2020 at 4.00 pm. An overwhelming response is received from participants. Nearly 97 people from our Institution as well as from other institution have attended the program.

The webinar began with the welcome address by the Head of the Department Ms.P,Kavitha/ECE. She has introduced and welcomed the Ms. K.Ramya, Software Engineer, Tata Consultancy Services, Chennai. The session then continued by Ms.K.Ramya who began with an introduction about Interview skills and coding Techniques, following which she shed the light on the skills needed to get job in top MNCs, and how to face the technical interviews and how to improve the coding skills in various language platforms.

In sequel, she added the below points in her speech:

A technical skill is the ability to carry out a task associated with technical roles such as IT, engineering, mechanics, science or finance. Typical technical skills are programming, the analysis of complex figures or the use of specific tools. The majority of technical skills require experience and sometimes extensive training to master. Technical skills are found in many different industries but the most common ones include:

1. Programming
2. Project Management
3. Analysis of Big Data and Business Intelligence
4. Information Security

The session ended with hearty thanks to Ms. K.Ramya at 05.00 pm.

“Interview Skills and Coding Techniques”

Date: 08-07-2020

## ***Interview Skills***

There are some easy steps that you can take that will increase your chances of success at interviews.

First, remember that job interviews should be a process of two-way communication. Not only are they a tool for employers to use to evaluate you, but they are also an opportunity for you to assess the job, the organization, and to see if there is a “fit.”

The keys to a successful interview are preparation and practice. The following suggestions will help you prepare for an interview:

**Self-evaluation** It is important for you to think about yourself and your past experiences in order to be ready to articulate what you have to offer an employer. Consider the following topics:

- How your present and past experience relate to the position
- Your current and future career goals
- What skills and expertise you have to offer
- The skills that you would like to develop or improve
- Location, salary, and lifestyle priorities
- Kinds of people and environments you prefer
- Past experiences you want to highlight such as volunteer

## ***Before the Interview***

**Research the Company** - A company's website is an excellent place to begin. It usually gives you information on whether it is international or domestic, what its revenues are, how many locations it has, and the nature of its major products. Most companies are very proud of their websites. Don't be surprised if one of the first questions interviewers ask when you arrive is, "Have you have had a chance to look at our website?"

**Practice interviews** - Write down a list of possible questions that you think may be asked, then have a friend act as an interviewer and direct them to you in a practice interview situation. Don't stop until you feel comfortable answering each question. Practicing beforehand will make you feel more comfortable and relaxed during the interview.

**Dress Professionally** - In today's environment, wearing a suit isn't always necessary. Contact the HR Manager of the company or your recruiter, and find out what the dress code is for the company at which you are going to interview. Then dress one level above. For instance, if it is business casual, men can wear dress pants, dress shirt, and sport coat. Women can wear a pantsuit, dress, or a skirt and blouse. Visual impressions are very important. Therefore, if in doubt, always dress on the conservative side.

**Arrival** - Try to arrive at the interview location a little early. This gives you time to determine where you need to go, and will give

“Interview Skills and Coding Techniques”

Date: 08-07-2020

### ***During the Interview***

**First impressions** - First impressions take only thirty seconds. Establishing rapport, direct and sustained eye contact, a firm handshake, a warm smile, good posture, and introducing yourself in a confident manner are important ingredients. A well-groomed, professional appearance is critical. Greet the interviewer with a firm handshake, whether it is a woman or a man. (No one likes a weak handshake.) Always maintain eye contact while shaking hands.

**Smile** - A smile denotes confidence in a candidate. Try to smile often. Also, don't be afraid to use some hand animation while answering questions. This suggests enthusiasm in a candidate.

**Body Language** - Use good posture, and look the interviewer right in the eye. Sit up straight. Never slouch.

**Speak Clearly** - Don't mumble. It portrays a lack of confidence. Speak with assurance. This indicates confidence.

**Listen Before Answering** - Allow the employer to begin the interview, but be prepared with some opening statements or questions such as, "I understand that this position involves....," or "What are you looking for in a job candidate?" Make sure you understand the question. If not, ask the interviewer to clarify it. Don't be afraid to take some time to think before answering. Interviewers are impressed with someone who thinks out an answer before speaking.

### ***After the Interview***

**Back in Touch** - Ask the interviewer when s/he expects to get back to you on her/his decision.

**Get Everyone's Business Card** - Before you leave, be sure to get the business cards of all of the people with whom you visited. If you cannot do that, ask a secretary for their names and e-mail addresses.

**Thank the Interviewer** - Verbally thank the interviewer for taking the time to interview you, before leaving. Within a day, send thank-you letters to all of the interviewers with whom you spoke. This does not need to consist of a written letter sent via snail mail; an e-mailed thank-you works just as well.

**Do not give up** - Sometimes, within ten minutes of the start of an interview, you will know that the job is not one you want to pursue. If you begin to feel this way, don't give up on the interview. Continue to interview as if the job was the most important thing in the world. This provides you with practice for your next interview, which may be for your dream job! Not all interviews will lead to offers of employment, but, if you approach every interview as if it's the most important interview you ever had, you will come out a winner!

Department of Electronics and Communication Engineering organized a webinar on “Antenna Applications in 5G” on 15.07.20 at 11.00 am. An overwhelming response is received from participants. Nearly 97 people from our Institution as well as from other institution have attended the program.

The webinar began with the welcome address by the Head of the Department Ms.P,Kavitha/ECE. She has introduced and welcomed the Dr. S. Suresh, Professor, Department of Electronics & Communication Engineering, Sri Indu Institute of Engineering and Technology, Hyderabad. The session then continued by Dr. S. Suresh who began with an introduction about Antennas and its types, following which he shed the light on the advanced technologies of The key enabling 5G technologies under development include novel multiple access strategies, massive MIMO, full digital beam forming or hybrid beam forming, ultra-dense networking.

In sequel, he added the below points in her speech:

5G will support significantly faster mobile broadband speeds and extensive mobile data usage as well as enabling the full potential of the Internet of Things . From virtual reality and autonomous cars to the industrial Internet and smart cities, 5G will be at the heart of the future of communications. As well as conventional bands, 5G applications will have to utilize higher frequency bands in the millimetre wave region to enable wider bandwidth and higher data rates. The higher frequencies, wider bandwidths, and the need for beam forming, beam steering, and multiple beams are significant challenges to antenna designers. Low-profile efficient antennas and antenna arrays to ensure reliable and interference-free communications are needed, but requirements for increased power, larger bandwidth, higher gain, and insensitivity to the presence of the human user further complicate the antenna and propagation aspects. This indicates the need for novel ideas and very innovative solutions in antenna design.

The session ended with hearty thanks to the Professor Dr. S. Suresh at 12.00 pm.

## RESOURCE PERSON DETAILS

Dr. S. Suresh,

Professor,

Department of Electronics & Communication Engineering,

Sri Indu Institute of Engineering and Technology,

Hyderabad

S. Suresh received B.E. degree in Electronics and Communication Engineering from Periyar University, M.Tech degree (II Rank) in Sensor System Technology from VIT University, Tamil Nadu, India in 2004 and 2008 respectively. PhD in Information and Communication Engineering from Anna University, Chennai in 2017. He has a rich teaching experience of 13 years in prestigious Engineering Colleges such as Karunya University, Bannari Amman Institute of Technology and etc. He is currently working as Professor at Sri Indu Institute of Engineering and Technology, Hyderabad, India. To his credit he has published several research papers in reputed International, National journals and conferences. He is also life member of ISTE, IAENG, Associate Member of IRED and IIRJC. He has organized many National level workshops, Symposiums and attended Faculty Development Programs, Seminars, Workshops, Conferences etc. His research interest includes Microstrip Antenna Design, UWB Antenna for Bio-medical applications, RF and Microwave technology and Fractal Antenna.

### Presentation Outlines

- Cellular Communication Technology Evolution
- Mobile Phone evolution
- Mobile Antenna Technology evolution
- Antennas in 5G Mobile Devices
- 5G Introduction
  - What is 5G
  - 5G Vision
  - 5G application Scenarios
  - 5G Usage Socio-economic prospective
  - Key Wireless Innovation areas
- 5G Antenna Technology
  - 5G Frequency coverage
  - Antenna Requirements
  - Antenna design and placement constraints
  - MIMO
  - Massive MIMO

### Mobile Phone Evolution

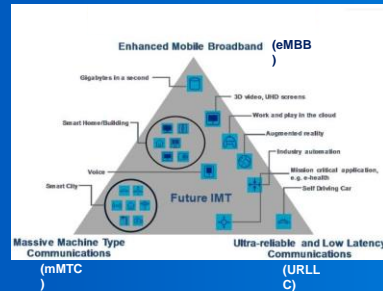

### What is 5G?

- 5G is a term used to describe the next generation of mobile network beyond 4G LTE mobile network.
- No Standard yet so the definition is still not solid.
  - Commercially available after 2020 timeframe.
  - Many trial at present.

FCC Chairman Tom Wheeler compared 5G to a Picasso painting. **"I see something different than you see,"** he said. "I think that's where 5G is right now. It's all in the eye of the beholder."

### 5G Application Scenarios

1. eMBB: multi-gigabit per second (Gbps) data rates for applications like virtual reality and the ability to support extensive data traffic growth.
2. URLLC: Including very low latency (sub-1ms) and very high availability, reliability and security to support services such as autonomous vehicles and mobile healthcare.
3. mMTC: Including the ability to support a massive number of low cost IoT connections with very long battery life and wide coverage including inside buildings.

### 5G Usages Socio-economics Prospective

### 5G Frequency spectrum

- Low bands below 1 GHz: longer range for e.g. mobile broadband and massive IoT e.g. 600 MHz, 700 MHz, 850/900 MHz
- Mid bands 1 GHz to 6 GHz: wider bandwidths for e.g. eMBB and mission-critical e.g. 3.4-3.8 GHz, 3.8-4.2 GHz, 4.4-4.9 GHz & LAA
- High bands above 24 GHz (mmWave): extreme bandwidths e.g. 24.25-27.5 GHz, 27.5-29.5, 37-40, 64-71 GHz

Department of Electronics and Communication Engineering organized a webinar on “Microwave Amplifier Design for Specified Gain” on 22.07.20 at 11.00 am. An overwhelming response is received from participants. Nearly 97 people from our Institution as well as from other institution have attended the program.

The webinar began with the welcome address by the Head of the Department Ms.P,Kavitha/ECE. She has introduced and welcomed the Dr. D. Helana Margret, Assistant Professor, Department of Electronics & Communication Engineering, Alagappa Chettiar Government College of Engineering and Technology, Karaikudi. The session then continued by Dr. D. Helana Margret who began with an introduction about Microwave Amplifier, following which she shed the light on the advanced technologies of the creative ways in which tubes may be constructed, and several high-frequency electron tube designs have been made to overcome these challenges.

In sequel, she added the below points in her speech:

Two of the researchers instrumental in the initial development of the IOT, a pair of brothers named Sigurd and Russell Varian, added a second cavity resonator for signal input to the inductive output tube. This input resonator acted as a pair of inductive grids to alternately “bunch” and release packets of electrons down the drift space of the tube, so the electron beam would be composed of electrons traveling at different velocities. This “velocity modulation” of the beam translated into the same sort of amplitude variation at the output resonator, where energy was extracted from the beam. The Varian brothers called their invention a klystron.

The session ended with hearty thanks to the Professor Dr. D. Helana Margret at 01.00 pm.

2

## Cavity Resonators

### Cap and Coil form Resonant Circuit

A

### Wire has inductance, acts like a coil.

B

### Multiple wires add more inductance.

C

### Continuous enclosed cavity acts like many wires.

D

A **cavity resonator**, is one in which the waves exist in a hollow space inside the device. Acoustic cavity resonators in which sound is produced by air vibrating in a cavity with one opening, are known as **Helmholtz resonators**.

August 29, 2017

3

August 29, 2017

4

The cavity has interior surfaces which reflect a wave of a specific frequency. When a wave that is resonant with the cavity enters, it bounces back and forth within the cavity, with low loss. As more wave energy enters the cavity, it combines with and **reinforces** the standing wave, increasing its intensity

An illustration of the electric and magnetic field of one of the possible modes in a cavity resonator.

## Rectangular cavity resonators

Starting from a rectangular waveguide of cross section 'a' by 'b' metres, we can add short circuit walls in the y-z planes, along the direction of propagation.

This gives a rectangular box whose resonant frequency is given by 'f'

where  $(f^* \lambda) = c = 3 \times 10^8$ , and

$$1/[\lambda]^2 = \{m/2a\}^2 + \{n/2b\}^2 + \{p/2d\}^2$$

Here, there are m half wavelength loops along x, n half wavelength loops along y, and p half wavelength loops along d. It is possible for just one only of the loop numbers m, n, and p to take the value zero.

The spacings of the walls are d along z, b along y, and a along x. We see there are many modes of a rectangular cavity.

August 29, 2017

6

## Conventional Vacuum Tube

The efficiency of conventional tubes is largely independent of frequency up to a certain limit. When frequency increases beyond that limit, several factors combine to rapidly decrease tube efficiency.

Tubes that are efficient in the microwave range usually operate on the theory of **VELOCITY MODULATION**, a concept that avoids the problems encountered in conventional tubes.

August 29, 2017

7

## Frequency Limitations of Conventional Tubes

- Three characteristics of ordinary vacuum tubes become increasingly important as frequency rises.
- These characteristics are interelectrode capacitance, lead inductance, and electron transit time.
- The **INTERELECTRODE CAPACITANCES** in a vacuum tube, at low or medium radio frequencies, produce capacitive reactances that are so large that no serious effects upon tube operation are noticeable. However, as the frequency increases, the reactances become small enough to materially affect the performance of a circuit.
- For extremely high-frequency applications (above 1 GHz), the interelectrode capacitances and transit-time delays of standard electron tube construction become prohibitive.
- Transit time effects
- GBW product

Department of Electronics and Communication Engineering organized a webinar on “Augmented Reality and Virtual Reality in Electronics” on 29.07.20 at 11.00 am. An overwhelming response is received from participants. Nearly 97 people from our Institution as well as from other institution have attended the program.

The webinar began with the welcome address by the Head of the Department Ms.P,Kavitha/ECE. She has introduced and welcomed the Dr. N. Shobana Devi, Assistant Professor, Department of Electrical & Electronics Engineering, University College of Engineering, Ariyalur . The session then continued by Dr. N. Shobana Devi who began with an introduction about Augmented Reality, following which she shed the light on the advanced technologies of Mixed Reality experience, which combines elements of both AR and VR, real-world and digital objects interact.

In sequel, she added the below points in her speech:

**Augmented Reality** adds digital elements to a live view often by using the camera on a smart phone. Examples of augmented reality experiences include Snap chat lenses and the game Pokemon Go. **Virtual Reality** implies a complete immersion experience that shuts out the physical world. Using VR devices such as HTC Vive, Oculus Rift or Google Cardboard, users can be transported into a number of real-world and imagined environments such as the middle of a squawking penguin colony or even the back of a dragon. Extended Reality is an umbrella term that covers all of the various technologies that enhance our senses, whether they're providing additional information about the actual world or creating totally unreal, simulated worlds for us to experience.

The session ended with hearty thanks to the Professor Dr. N. Shobana Devi at 01.00 pm.

**“Electromagnetic Theory in Advanced Technology”**

Department of Electronics and Communication Engineering organized a webinar on “Electromagnetic Theory in Advanced Technology and Society ” on 05.08.2020 at 3.00 pm. An overwhelming response is received from participants. Nearly 97 people from our Institution as well as from other institution have attended the program.

The webinar began with the welcome address by the Head of the Department Ms.P,Kavitha/ECE. She has introduced and welcomed the Dr.P.S .Mangayarkarasi, Assistant Professor, Department of EEE, University College of Engineering ,Panruti. The session then continued by Dr.P.S .Mangayarkarasi who began with an introduction about Electromagnetic theory and its applications, following which she shed the light on the latest technology in real time electromagnetic signal processing.

In sequel, she added the below points in her speech:

The history of electromagnetic theory begins with ancient measures to understand atmospheric electricity, in particular lightning.<sup>[1]</sup> People then had little understanding of electricity, and were unable to explain the phenomena. Scientific understanding into the nature of electricity grew throughout the eighteenth and nineteenth centuries through the work of researchers such as Coulomb, Ampère, Faraday and Maxwell.

The session ended with hearty thanks to Dr.P.S .Mangayarkarasi at 04.00 pm.

### “Electromagnetic Theory in Advanced Technology and society”

#### ELECTROMAGNETIC FIELD

- An electromagnetic field (also EMF or EM field) is a physical field produced by moving electrically charged objects.
- It affects the behavior of charged objects in the vicinity of the field.
- The electromagnetic field extends indefinitely throughout space and describes the electromagnetic interaction.
- It is one of the four fundamental forces of nature (the others are gravitation, the weak interaction, and the strong interaction).
- The field can be viewed as the combination of an electric field and a magnetic field.
- The electric field is produced by stationary charges, and the magnetic field by moving charges (currents); these two are often described as the sources of the field.

#### ELECTROMAGNETISM

- Electromagnetism is one of the fundamental phenomenon in nature. It is responsible for almost all the phenomena in our daily life.
- Electromagnetism spans both electric fields and magnetic fields.
- When observed individually, electricity and magnetism behave differently but when unified, we can observe that both are interdependent on each other and they cannot be separated from each other.
- In order to fully understand Electromagnetism, we have to look at the four laws that govern electricity and magnetism.
- These are Gauss's laws in Electrostatics, Gauss's law in Magnetism, Ampere's law and Faraday's law.
- These laws were combined by James Clerk Maxwell in the year 1864 to give a complete set of relation and connection between both the forces of electricity and magnetism.

#### ELECTRIC FIELDS AND MAGNETIC FIELDS

##### ELECTRIC FIELDS

1. Electric fields arise from voltage.
2. Their strength is measured in Volts per meter (V/m)
3. An electric field can be present even when a device is switched off.
4. Field strength decreases with distance from the source.
5. Most building materials shield electric fields to some extent.

##### MAGNETIC FIELDS

1. Magnetic fields arise from current flows.
2. Their strength is measured in amperes per meter (A/m). Commonly, EMF investigators use a related measure, flux density (in micro tesla ( $\mu T$ ) or millie tesla (mT) instead.
3. Magnetic fields exist as soon as a device is switched on and current flows.
4. Field strength decreases with distance from the source.
5. Magnetic fields are not attenuated by most materials.

#### USES FOR ELECTROMAGNETS

- An electromagnet does all the things that ordinary magnets can do, but you can switch them on and off.
- An electric bell – uses an electromagnet to rapidly pull the hammer over to the gong then release it.
- For sorting scrap – an electromagnet can be used to pick up and put down magnetic materials, sorting them from non-magnetic scrap.
- In speakers – an electromagnet is used to move a cone very rapidly, causing sound waves.
- In switches – a small current can be used to operate an electromagnet, which in turn can control another circuit in which a much larger current might be flowing. This isolates the large current from the person operating the switch, making it safer.

#### USES FOR ELECTROMAGNETS

##### Relays are used in circuit control

Department of Electronics and Communication Engineering organized a webinar on “Website Development and SEO” on 19.11.2020 at 12.00 PM. An overwhelming response is received from participants. Nearly 60 people from our Institution as well as from other institution have attended the program.

The webinar began with the welcome address by the Head of the Department Ms.P,Kavitha/ECE. She has introduced and welcomed the Mrs.Jerlin Hemnath, MD & Technical head, Hitakey infosys . The session then continued by Mrs.Jerlin Hemnath who began with an introduction about Website Developments , following which he shed the light on the advanced technologies of Website Development and Search Engine optimization, Mobile commerce, online trading.

In sequel, she added the below points in her speech:

Search engines such as Google and Bing use bots to crawl pages on the web, going from site to site, collecting information about those pages and putting them in an index. Next, algorithms analyze pages in the index, taking into account hundreds of ranking factors or signals, to determine the order pages should appear in the search results for a given query.

Search ranking factors can be considered proxies for aspects of the user experience. Our Periodic Table of SEO Factors organizes the factors into six main categories and weights each based on its overall importance to SEO. For example, content quality and keyword research are key factors of content optimization, mobile-friendliness are important site architectures

The session ended with hearty thanks to the Mrs.Jerlin Hemnath at 1.00 pm.

“Website Development and SEO”

The screenshot displays a Zoom webinar interface. At the top, it says "HITKEY INFOSYS is presenting". The main window shows a presentation slide titled "NEED OF SEO" with the following text:

SEO helps to ensure that a site is accessible to a search engine and improves the chances that the site will be found by the search engine.

It is common practice for Internet users to not click through pages and pages of search results, so where a site ranks in a search is essential for directing more traffic toward the site. The higher a website naturally ranks in organic results of a search, the greater the chance that that site will be visited by a user.

On the left, a "Class List" shows 25 participants, including Abarna Abi, Aporosa Banu, Dharshini Devi, Sandhiya Ece, Jency Elakkiya, Gokul Gokul, Head Master, Hitkey Infosys, Karthik K, Kamali K, Kavi Kavi, Nandhini Nandhini, N.Karthiba Nk, Kavitha P, Sangeetha P, and Dhana Priya. A notification at the bottom left states "Dinesh Arivazhagan has left the meeting".

On the right, a "Meeting details" panel shows 40 people in the meeting. The list includes dhana priya, Dharshini Devi, FAZILA FATHIMA, G. T. Thenmozhi, Gokul Gokul, Gunavathi Anandhan, HITKEY INFOSYS, HITKEY INFOSYS Presentation, and Jency Elakkiya. The HITKEY INFOSYS logo is also visible in the center of the interface.

Department of Electronics and Communication Engineering organized a webinar on “Machine learning-A probabilistic perspective” on 18.11.2020 at 12.30 am. An overwhelming response is received from participants. Nearly 60 people from our Institution as well as from other institution have attended the program.

The webinar began with the welcome address by the Head of the Department Ms.P,Kavitha/ECE. She has introduced and welcomed the Dr. R. Arun prakash, Assistant Professor, Department of Computer Science and Engineering, University College of Engineering, Ariyalur. The session then continued by Dr. R. Arun prakash who began with an introduction about Machine learning techniques, following which he shed the light on the advanced technologies of Machine learning techniques under development include types , supervised learning , unsupervised learning, reinforcement learning techniques.

In sequel, he added the below points in his speech:

Machine learning is a hot topic in research and industry, with new methodologies developed all the time. The speed and complexity of the field makes keeping up with new techniques difficult even for experts and potentially overwhelming for beginners. To demystify machine learning and to offer a learning path for those who are new to the core concepts, let’s look at ten different methods, including simple descriptions, visualizations, and examples for each one. A machine learning algorithm, also called model, is a mathematical expression that represents data in the context of a problem, often a business problem. The aim is to go from data to insight. For example, if an online retailer wants to anticipate sales for the next quarter, they might use a machine learning algorithm that predicts those sales based on past sales and other relevant data.

The session ended with hearty thanks to the Professor Dr. R.Arun prakash at 1.30 pm.

Department of Electronics and Communication Engineering organized a webinar on “Machine learning-A probabilistic perspective” on 20.11.2020 at 11.00 am. An overwhelming response is received from participants. Nearly 60 people from our Institution as well as from other institution have attended the program.

The webinar began with the welcome address by the Head of the Department Ms.P,Kavitha/ECE. She has introduced and welcomed the Mr.M.Umar Kathap, senior software engineer, valeo India pvt ltd. The session then continued by Mr.M.Umar Kathap who began with an introduction Automotive Embedded Systems, following which he shed the light on the advanced technologies of Embedded systems under development include types , real time applications in automotive industry.

In sequel, he added the below points in her speech:

As always been said “Necessity is the mother of invention “....Today Embedded systems are inventions that have made the world to think and bring out different innovations and developments in the field of automobiles. Embedded System is basically a system of hardware and software designed for control and access of data. As a system it includes a controller as the brain. This controller chip can be a PIC microcontroller, 8051 controller, ASICs, ARM, or any type of FPGA. Today embedded systems applications are popular and their development has become a boon to automobile industry. Applications in the form of home appliances, for automobiles, entertainments, consumer electronics, medical and telecommunication etc. are every day in the mode of development.

The session ended with hearty thanks to the Professor Mr.M.Umar Kathap at 12.00 pm.

Department of Electronics and Communication Engineering organized a webinar on “Machine learning-A probabilistic perspective” on 21.11.2020 at 09.30 am. An overwhelming response is received from participants. Nearly 60 people from our Institution as well as from other institution have attended the program.

The webinar began with the welcome address by the Head of the Department Ms.P,Kavitha/ECE. She has introduced and welcomed the Mr.R.Prabu, Senior data engineer/Lead, warner media,U.S. The session then continued by Mr.R.Prabu who began with an introduction about Soft skills and leadership skills, following which he shed the light on the soft skills and leader ship skills .

In sequel, he added the below points in his speech:

When businesses first embark on employee training, they tend to focus on hard skills that are essential for day to day operations and easy to define and measure things like teaching office employees Excel or showing fast food employees how to flip burgers. But while hard skills are an easy sell, the oft-neglected soft skills are essential for leading people, solving problems, earning customer trust, and closing deals all key factors to business success. A soft skills-focused online training program helps prepare present and future executives to face such challenges. A soft skills training course focused on business communication skills will allow your executives to write and express themselves more clearly, and help them build their public speaking skills. With the exception of a few natural born corporate leaders (such as Bill Gates and Jeff Bezos), leadership and delegation skills do not come easy to most employees. The fact that team dynamics can often get incredibly nuanced only helps to further complicate things.

The session ended with hearty thanks to the Mr.R.Prabu at 10.30 am

An overwhelming response is received from participants. Nearly 60 people from our Institution as well as from other institution have attended the program.

The webinar began with the welcome address by the Head of the Department Ms.P,Kavitha/ECE. She has introduced and welcomed the Mr.U.Yuvaraj, Project Engineer, Ultra automation technology private ltd, chennai. The session then continued by Mr.U.Yuvaraj who began with an introduction about programmable logic controllers and its real time applications.

In sequel, he added the below points in his speech:

The devices such as pushbutton, sensors are connected as the input devices, which can detect a change in the input signals in the PLC. The input signal passes through the barrier that converts the voltage into low voltage, such as 5V. The CPU monitors the state of the input. Based on the specified logic, CPU processes and produces the output signal. The barrier present at the output terminal prevents the PLC from external noise and converts the low voltage to high voltage to drive output devices. The output signal controls the output devices, such as motor, controllers, pilot lights, etc. CPU or Central Processing Unit is present in the Central rack of the PLC. The data bus is used as a medium to send data between different elements in the PLC. It controls all functions, such as programmed instructions stored in the memory of PLC. It also controls logic, communications, and monitoring in the PLC. It is the unit of the PLC that contains a microcontroller or microprocessor.

The session ended with hearty thanks to the Mr.U.Yuvaraj at 3.00 pm

The webinar began with the welcome address by the Head of the Department Ms.P,Kavitha/ECE. She has introduced and welcomed the Mr.G.Vignesh, senior system Engineer, Infosys ltd, bangalore. The session then continued by Mr.G.Vignesh who began with an introduction about world wide web and its real time applications .

In sequel, he added the below points in his speech:

The World Wide Web (WWW), commonly known as the Web, is an information system where documents and other web resources are identified by Uniform Resource Locators (URLs, such as <https://example.com/>), which may be interlinked by hypertext, and are accessible over the Internet. The resources of the Web are transferred via the Hypertext Transfer Protocol (HTTP), may be accessed by users by a software application called a *web browser*, and are published by a software application called a *web server*. The World Wide Web is not synonymous with the Internet, which pre-existed the Web in some form by over two decades and upon whose technologies the Web is built. English scientist Tim Berners-Lee invented the World Wide Web in 1989. He wrote the first web browser in 1990 while employed at CERN near Geneva, Switzerland. The browser was released outside CERN to other research institutions starting in January 1991, and then to the general public in August 1991. The World Wide Web has been central to the development of the Information Age, and is the primary tool billions of people use to interact on the Internet.

Department of Electronics and Communication Engineering organized a webinar on “Machine Learning – Machine rules you” on 09.04.2021 at 02.00 PM. An overwhelming response is received from participants. Nearly 50 people from our Institution as well as from other institution have attended the program.

The webinar began with the welcome address by the Head of the Department Ms.P,Kavitha/ECE. She has introduced and welcomed the Mrs.Jerlin Hemnath, MD & Technical head, Hitakey infosys . The session then continued by Mrs.Jerlin Hemnath who began with an introduction about Machine learning Technique with Artificial Intelligent (AI), following which he shed the light on the advanced technologies of Machine learning Technique with AI under development include types , supervised learning , unsupervised learning, reinforcement learning techniques In sequel, she added the below points in her speech:

Machine learning requires a lot of data, typically thousands of records, in order to make accurate predictions, so it's only applicable for high volume use cases, such as sales lead qualification or customer support auto-responses. Machine learning is also better suited to situations that have a large number of factors (columns in the data set), since it is better equipped to identify patterns in the data than asking people to both find the patterns and manually develop rules for each of them.

An example of this would be predicting real estate prices, in which an algorithm can review historical sales prices and evaluate all the different factors, such as location, square footage, amenities, etc. Finally, machine learning beats out rules-based systems in rapidly changing environments, such as e-commerce recommendations and sales forecasting.

The session ended with hearty thanks to the Mrs.Jerlin Hemnath at 3.00 pm.

An overwhelming response is received from participants. Nearly 60 people from our Institution as well as from other institution have attended the program.

The webinar began with the welcome address by the Head of the Department Ms.P,Kavitha/ECE. She has introduced and welcomed the Dr.M.Phemina Selvi, Dept. of ECE, University College of Engineering, Villupuram. The session then continued by Dr.M.Phemina Selvi who began with an introduction about Recent Advances in Communication Systems, following which she shed the light on the different types of wireless communication include, , Satellite Communication, Microwave Communication, Mobile Communication Systems, Broadcast Radio, she added the below points in her speech

Did you know that there are almost 5000 satellites orbiting the earth right now? We have become used to instant communications and entertainment wherever we may live on the planet. However, it takes complex technology to maintain remote wireless communication and control of these satellites. In truth, wireless communication technology has an unseen impact on all of our lives each day. If you have a business, you may wonder how you can make the best use of the various types of wireless communication. There are so many types of wireless communication available today. With different technologies and aerial designs to support them, it pays to do thorough research and learn what wireless communication technologies will work best.

The session ended with hearty thanks to the Dr.M.Phemina Selvi at 01.30 pm.

**“Industrial IOT using Lorawan Technology”**

Department of Electronics and Communication Engineering organized a webinar on “Industrial IOT using Lorawan Technology” on 17.06.2021 at 11.30 AM. An overwhelming response is received from participants. Nearly 60 people from our Institution as well as from other institution have attended the program.

The webinar began with the welcome address by the Head of the Department Ms.P,Kavitha/ECE. She has introduced and welcomed the Mr.G. Gowtham Raj, Technical Manager, Enthu Technology Solution India Pvt. Ltd. The session then continued by Mr.G. Gowtham Raj who began with an introduction about Industrial IOT using Lorawan Technology, following which he shed the light on use of LoRaWAN for indoor Industrial IOT Applications also he added the below points in his speech

Low-Power Wide-Area Networks (LPWANs) have recently emerged as appealing communication systems in the context of the Internet of Things (IoT). Particularly, they proved effective in typical IoT applications such as environmental monitoring and smart metering. Such networks, however, have a great potential also in the industrial scenario and, hence, in the context of the Industrial Internet of Things (IIoT), which represents a dramatically growing field of application. In this paper we focus on a specific LPWAN, namely, LoRaWAN, and provide an assessment of its performance for typical IIoT employments such as those represented by indoor industrial monitoring applications. able to provide high reliability and timeliness, while ensuring very low energy consumption.

The session ended with hearty thanks to the Mr.G. Gowtham Raj at 12.30 pm.

### REPORT

Date: 04-11-2020

Photovoltaic (PV) cells are made of special materials called semiconductors such as silicon, which is currently the most commonly used. Basically, when light strikes the cell, a certain portion of it is absorbed within the semiconductor material. This means that the energy of the absorbed light is transferred to the semiconductor. The energy knocks electrons loose, allowing them to flow freely. PV cells also all have one or more electric fields that act to force electrons freed by light absorption to flow in a certain direction. This flow of electrons is a current, and by placing metal contacts on the top and bottom of the PV cell, we can draw that current off to use externally.

For example, the current can power a calculator. This current, together with the cell's voltage (which is a result of its built-in electric field or fields), defines the power (or wattage) that the solar cell can produce.

Conventional semiconductor solar cells are made by polycrystalline silicon or in the case of highest efficiency ones crystalline gallium arsenide.

But by this type of solar cell, it is observed that, only 35% of the sun's total energy falling on it could be judiciously used. Also, this is not so favorable on cloudy days, thus creating a problem. This major drawback led to the thought of development of a new type of solar cell embedded with nanotechnology. The process involved in this is almost the same as explained earlier. But the basic difference lies in the absorption of the wavelength of light from the sun.

### REPORT

Date: 03-06-2021

Laser ignition has become an active research topic in recent years because it has the potential to replace the conventional electric spark plugs in engines. Compared to conventional spark ignition.

Laser ignition allows more flexible choice of the ignition location inside the combustion chamber with the possibility to ignite even inside the fuel spray.

Modern engines are required to operate under much higher compression ratios, faster compression rates, and much leaner fuel-to-air ratios than gas engines today. It is anticipated that the igniter in these engines will face with pressures as high as 50MPa and temperatures as high as 4000 K. Using the conventional ignition system, the required voltage and energy must be greatly increased (voltages in excess of 40 kV) to reliably ignite the air and fuel mixture under these conditions. Increasing the voltage and energy does not always improve ignitability but it does create greater reliability problem.

Experiments with the direct injection engine have been carried out at the fundamental wavelength of the Nd:YAG laser as well as with a frequency doubled system. Experiments show that above a certain threshold intensity of the laser beam at the window even highly polluted surfaces could be cleaned with the first laser pulse which is important for operation in real world engines.

### REPORT

Date: 08-06-2021

The success of system-on-a-chip (SoC) hinges upon a well-concerted integrated approach from multiple disciplines, such as device, design, and application. From the device perspective, rapidly improving VLSI technology allows the integration of billions of transistors on a single chip, thus permitting a wide range of functions to be combined on one chip.

Application perspective, numerous killer applications have been identified, which can make full use of the aforementioned functionalities provided by a single chip. From the design perspective, however, with greater device integration, system designs become more complex and are increasingly challenging to design. Moving forward, novel approaches will be needed to meet these challenges.

For example, recognizing the stringent requirements on power consumption, memory bandwidth/latency, and transistor variability, novel power/thermal management, multi-processor SoC, reconfigurable logic, and design for verification and testing have now been incorporated into modern system design. In addition, we look into some plausible solutions.

**(Accredited by NAAC)**

**Department of Electronics and Communication Engineering**

**Academic Year 2020-2021 (Even)**

**Day 1 - "Cognitive radio Networks "**

**Date:07.06.21**

Department of Electronics and Communication Engineering organized a five days faculty development program on "Recent Advances in Communication Systems" on 07.06.2021 at 12.30 PM. An overwhelming response is received from participants. Nearly 60 people from our Institution as well as from other institution have attended the program.

The first day FDP began with the welcome address by the Assistant professor Mr.K.Karthikeyan/ECE. He has introduced and welcomed the Ms.P.Kavitha, Dept. of ECE, M.A.M School of engineering, Tiruchirappalli. The session then continued by Ms.P.Kavitha who began with an introduction about Recent Advances in Communication Systems, following which she shed the light on the different characteristics of cognitive radio , Architectures , Security issues , Applications she added the below points in her speech.

A cognitive radio (CR) is a radio that can change its transmission parameters based on the perceived availability of the spectrum bands in its operating environment. CRs support dynamic spectrum access and can facilitate a secondary unlicensed user to efficiently utilize the available underutilized spectrum allocated to the primary licensed users. A cognitive radio network (CRN) is composed of both the secondary users with CR-enabled radios and the primary users whose radios need not be CR-enabled. In this chapter, the authors provide an exhaustive analysis of the issues and the state-of-the-art literature solutions available with regards to the following four layers of the TCP/IP protocol layer stack, in the context of CRNs: physical layer (spectrum sensing), medium access control, routing, and transport layers.

The session ended with hearty thanks to the Ms.P.Kavitha at 01.30 pm.

**MAM School of Engineering,Trichy**  
**(Accredited by NAAC)**  
**Department of Electronics and Communication Engineering**  
**Academic Year 2020-2021 (Even)**  
**Day 2 - "Advances in human machine interface "**

**Date:08.06.21**

The second day began with the welcome address by the Head of the Department Ms.P,Kavitha/ECE. She has introduced and welcomed the Dr.N.Abdurrahman, Dept. of ECE, M.A.M School of engineering, Tiruchirappalli. The session then continued by Dr.N.Abdurrahman who began with an introduction about Recent Advances in Communication Systems, following which she shed the light on the Human – computer interfaces include, , types of interfaces , problems with user interfaces , design process he added the below points in her speech

A trend that has been developing even longer than HMI taking on the functionality of mobile devices is the increasing performance of HMI hardware. Moving down from the cloud to machine to machine, these same panel PCs also can act as masters for industrial Ethernet communication, such as via EtherCAT. This further increases the multitasking capabilities of a panel PC. Control companies that promote PC-based control have offered all-in-one HMI and controls devices for decades when the HMI display has an integrated central processing unit (CPU) (as opposed to a passive panel). This means that, with the appropriate processor performance, the HMI hardware has the potential to run not just the HMI software, but also the software for programmable logic controllers (PLCs), motion controls, and other functions, which is easier than integrating HMI hardware, a separate PC, and a stand-alone hardware PLC.

The session ended with hearty thanks to the Dr.N.Abdurrahman at 01.30 pm.

**MAM School of Engineering,Trichy**

**(Accredited by NAAC)**

**Department of Electronics and Communication Engineering**

**Academic Year 2020-2021 (Even)**

**Day3- "Antennas for emerging 5G communication "**

**Date:09.06.21**

The third day began with the welcome address by the Head of the Department Ms.P,Kavitha/ECE. She has introduced and welcomed the Mr.K.Karthikeyan, Dept. of ECE, M.A.M School of engineering, Tiruchirappalli. The session then continued by Mr.K.Karthikeyan who began with an introduction about Recent Advances in Communication Systems, following which he shed the light on the cellular communication technology, mobile antenna technology, Massive MIMO he added the below points in her speech.

5G mobile communications technology will bring new experiences to industry and society, including higher data rates or greater capacity, higher bandwidth, increased security, and lower latency. These developments will create new opportunities for advancing society and businesses: 5G is going to make a significant change in how we live in this world.

The key enabling 5G technologies under development include novel multiple access strategies, massive MIMO, full digital beam forming or hybrid beam forming, ultra-dense networking, etc. The implementation of these high-level technologies will bring about new challenges for the designers of the physical infrastructure. These challenges undoubtedly include the antenna, but also the associated microwave systems and the characterization of the radio propagation environment.

The session ended with hearty thanks to the Mr.K.Karthikeyan at 01.30 pm.

**MAM School of Engineering, Trichy**  
**(Accredited by NAAC)**  
**Department of Electronics and Communication Engineering**  
**Academic Year 2020-2021 (Even)**

**Day 4- "Advances of modern approach in AI "**

**Date:10.06.21**

The fourth day FDP began with the welcome address by the Head of the Department Ms.P,Kavitha/ECE. She has introduced and welcomed the Dr.N.Abdurrahman, Dept. of ECE, M.A.M School of engineering, Tiruchirappalli. The session then continued by Dr.N.Abdurrahman who began with an introduction about Recent Advances in Communication Systems, following which he shed the light on the what is AI? Thinking humanly-cognitive modeling, AI prehistory , state of the art he added the below points in her speech.

Artificial intelligence and machine learning technology now permeate our lives. We are increasingly using them, or subject to them, whether we realise it or not. Increasingly ubiquitous implementations include practical speech recognition, machine translation, self-driving vehicles and household robotics. *Artificial Intelligence: A Modern Approach* helps provide clear understanding of exactly what AI and machine learning comprise, and what they can and cannot achieve. Such clarity of thought helps us move from buzzword-dropping to actual scientific understanding. Underlying concepts are explained with clear analogies and accessible language.

The session ended with hearty thanks to the Dr.N.Abdurrahman at 01.30 pm.

**MAM School of Engineering,Trichy**

**(Accredited by NAAC)**

**Department of Electronics and Communication Engineering**

**Academic Year 2020-2021 (Even)**

**Day 5- "A Compendium of wireless communication"**

**Date:11.06.21**

Department of Electronics and Communication Engineering organized a webinar on "Recent Advances in Communication Systems" on 10.06.2021 at 12.30 PM. An overwhelming response is received from participants. Nearly 60 people from our Institution as well as from other institution have attended the program.

The fifth day FDP began with the welcome address by the Head of the Department Ms.P,Kavitha/ECE. She has introduced and welcomed the Dr.M.Phemina Selvi, Dept. of ECE, University College of Engineering, Villupuram. The session then continued by Dr.M.Phemina Selvi who began with an introduction about Recent Advances in Communication Systems, following which she shed the light on the different types of wireless communication include, , Satellite Communication, Microwave Communication, Mobile Communication Systems, Broadcast Radio, she added the below points in her speech

Did you know that there are almost 5000 satellites orbiting the earth right now? We have become used to instant communications and entertainment wherever we may live on the planet. However, it takes complex technology to maintain remote wireless communication and control of these satellites. In truth, wireless communication technology has an unseen impact on all of our lives each day. If you have a business, you may wonder how you can make the best use of the various types of wireless communication. There are so many types of wireless communication available today. With different technologies and aerial designs to support them, it pays to do thorough research and learn what wireless communication technologies will work best.

The session ended with hearty thanks to the Dr.M.Phemina Selvi at 01.30 pm.

#### Objectives of the FDP

This FDP will provide an opportunity to highlight recent trends and developments in the field of communication systems. It will further give impetus to the participants towards bringing out newer and efficient techniques.

#### Contents of the FDP

The following topics will be focused in the FDP

1. Cognitive Radio Networks
2. Advances in Human machine Interface
3. Antennas for emerging 5G Communication
4. Advances of modern approach in AI
5. A compendium of wireless communication

Affiliated to Anna University

#### About the Institution

M.A.M School of Engineering, was founded in the year 2010 and was Affiliated to the Anna University, Chennai and approved by the All India Council of Technical Education (AICTE) in the same year. The college secured its ISO 9001 certification in the year 2003, and continues to hold the same, till date, with the award of ISO 9001:2010. M.A.M School of Engineering, founded by the lofty mission and vision of its founder, Janab M. Abdul Majedu under the guidance of a noted engineer, academican and an administrator, Dr. S. Sathikh, the former Vice Chancellor of the University of Madras, is led by Mr. M.A. Peer Mohamed, its Correspondent. Dr P.Ranjith Kumar assumes office as Principal and led the organization to get NAAC accreditation by the year 2017. The administration is backed up by the well experienced person Prof C. Rajagopalan, who is also an accomplished academican and an administrator, with a number of laurels and achievements to his credit.

#### About the Department

Electronics and Communication Engineering department was established in the academic year 2010-2011. The department occupies a prominent place in the annals of its academic history. The department has been consistently producing illustrious engineering graduates of high caliber who occupy prestigious positions in the academic and industrial fields. Majority of our faculty have intensive experience in research and teaching which provides the necessary cutting edge for industrial and research exposures to the students. The department organizes various student and faculty level technical events such as workshops, guest lectures, industrial visits and technical symposium to refine skills and talents of the Students

#### Resource Person

Faculty members of Government Institution and Faculty members of Department of ECE, MAM School of Engineering will be handling the theory sessions in the FDP

#### Vision

To deliver the highest quality engineering education, create cutting edge research and innovative technology for the benefit of the society locally and globally.

#### Mission

To be recognized as a leader in engineering education, research and the application of knowledge to benefit the society globally.

## RESOURCE PERSON DETAILS

Dr.M.Phemina Selvi,  
Dept. of ECE,  
University College of Engineering,  
Villupuram

### Profile details:

**UG:** B.E-Electronics and Communication Engineering-Vellore Institute of Technology, Vellore

**PG:** M.Tech- Electronics and Communication Engineering-Pondicherry Engineering College, Pondicherry.

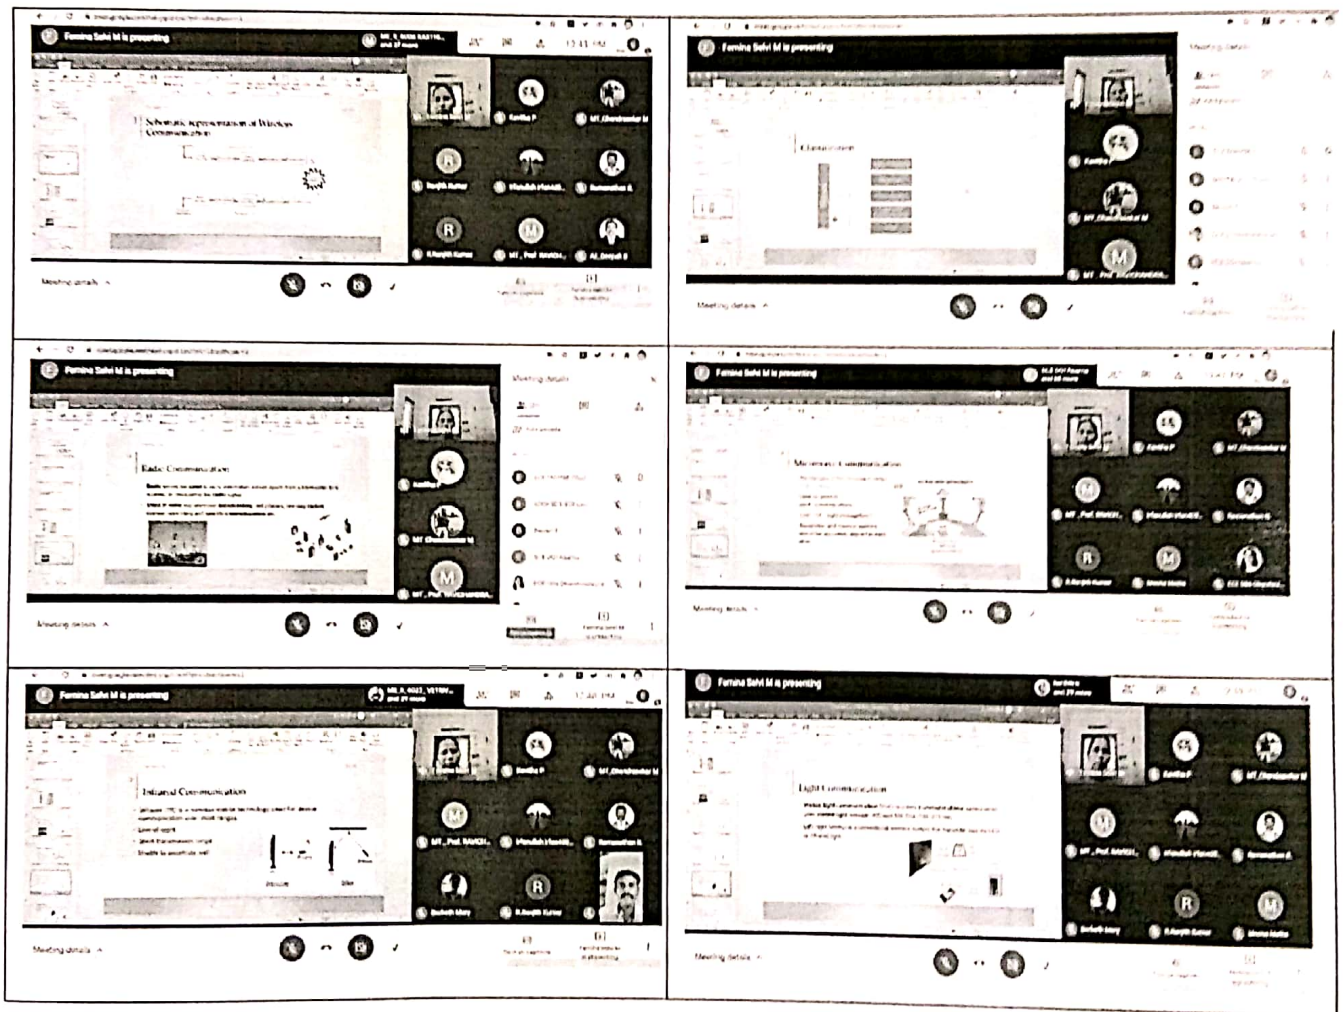

**Ph.d** in Wireless Communication under Anna University

### Professional experience:

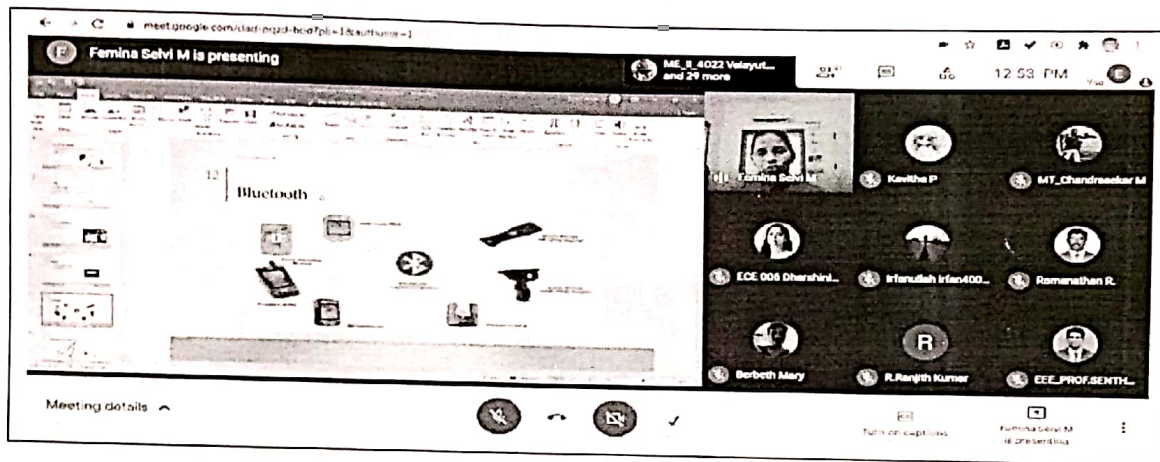

- As Lecturer in Elumalai Polytechnic College , Villupuram, from June 1996 to July 1998.
- As Lecturer in V.R.S College of Engineering & Technology , Villupuram, from August 1998 to June 2005.
- As an Assistant Professor in V.R.S College of Engineering & Technology , Villupuram, from July 2005 to August 2009.
- As an Assistant Professor at Anna, University of Technology, Tiruchirappalli, Ariyalur campus from August 2009 to January 2015
- As a Dean (i/c) in Anna, University of Technology, Tiruchirappalli, Ariyalur campus from August 2010 till September 2012
- As an Assistant Professor at University College of Engineering Ariyalur October 2012 to January 2015
- As an Assistant Professor in University College of Engineering, Villupuram from 7<sup>th</sup> January 2015 to Till date.
